

Social sciences in public health

Description

The integration of social science theory, research methods and intervention practice is a challenge in health research and public health practice. This course takes a unique approach by aligning teachers from different social science disciplines for team teaching, incl. discovery-based learning methods, lectures and discussions. Supervised by teachers, students also work on and present their own projects in groups.

Objectives

For students to learn to use social science theory and methods to guide empirical health research and intervention work.

Dates

Monday, Oct 3 – Friday, Oct 7, 2016, 8.45 – 16.45

Eligibility

Students with a keen interest in Social Science theory and methods applied to health and health promotion are invited to apply. Participants will be admitted based on their interests and qualifications. Students should submit with their online registration a short "letter of interest" providing these information.
