

Basics of Ethics in Health Sciences Research

Description

This module provides an introduction to ethics in health sciences research. Participants will learn about the history and principles of ethics of clinical and public health research. Special emphasis will be given to social and global justice in health, including ethical aspects of clinical studies in low income countries. The course further covers selected relevant topics such as the Swiss human research law, research ethics committees in Switzerland and the ethics of the use of “big data” in public health.

Objectives

At the end of the module participants will have an understanding of the basics and principles of ethics in health research, and they will have gained deeper knowledge in some selected areas.

Dates

20 - 21 June 2018

Eligibility

Open to PhD students of SSPH+ PhD Program in Public Health and of Graduate Schools for Health Sciences and for Cellular and Biomedical Sciences, University of Bern. Other students and external participants are welcome to apply for limited space.
